Spot-Spitter® Downspray

Brief Overview

Welcome to the easy, maintenance free, no digging efficient irrigation system you've been looking for. In just a couple hours we install a complete irrigation system for any type of garden. Save on your water bill and your time. We install a complete irrigation system for (any type of

garden) your shrub, perennial and tree gardens in just a couple of hours and save you hundreds in water waste and time.

What is Spot-Spitter®

Spot-Spitter is a type of irrigation system installed above ground and can easily be disguised under bark for easy access at a later time and further expansion if necessary. The product has been tested over the years against UV light and deterioration and is optimized for easy and rapid modification.

Benefits

- **Easy installment** - No digging involved, no muddy mess unlike installing a traditional irrigation system
- **Maintenance free** - No worries about winterizing and clogging. The system cleans itself and never breaks due to freeze.
- **Easy expansion/reduction** - Add a section, take away a section within minutes. Modification made easy!
- **Saves Water** - Due to the efficient design of the spitter system each plant will receive a spitter that controls the amount of water it needs in a short time.
- **Cost effective** - With a fraction of the cost compare to a traditional sprinkler system, every yard MUST have these installed.
- **Water everything efficiently** - Water your pots, hanging baskets and vegetable gardens while on vacation. Modify them every year with ease.
- **UV Resistance/Freeze proof**

How does it work?

The water source can be any faucet, existing sprinkler head, or a dedicated zone on your sprinkler system. The $\frac{3}{4}$ " tube with the $\frac{1}{8}$ " and the proper spitter head offers enough pressure and gallons per minute to satisfy watering needs of over 100 plants in a single zone. No need to water for hours. Since the Spitter system is a dedicated plant watering system, within few minutes you can be sure your plants are perfectly hydrated.
